Subject Index of Volume 73

Adhesion
particulate solid; effect of temperature on, to substrate surface, 267
Adhesion behaviour
influence of particle size on, of powders, after application of initial press-on force, 117
Annular ball mill
kinetics of fine grinding in, 101

Binary dielectric/conductor
fluidized beds; electrostatic behaviour in, 11
Breakage kinetics
and particle aggregation: *in situ* measurement of, in concentrated suspension, 75
Brittle material
experimental results on fragmentation of, 61
Bubble probe
and heat flux gauge for fluidized bed system, 163

Compacted powders
dielectric spectroscopy of; sample preparation using highly conducting resin, 91

Dielectric sensors
non-invasive; particle size measurement using, 85
Dielectric spectroscopy
of compacted powders; sample preparation using highly conducting resin, 91
Dispersions
stability of, of $PbTiO_3$ powders in aqueous and non-aqueous liquids, 157
Dolomite
influence of thermal activation on surface properties of, 261

Electromechanical valve
for solids, 21
Electrostatic behaviour
in binary dielectric/conductor fluidized beds, 11
Erosion
and hydrodynamics: three-dimensional kinetic theory modelling of, in fluidized beds, 127

Fine grinding
kinetics of, in annular ball mill, 101
Fineness
effect of, of wear particles from steel balls on rate of hydrogen generation during wet grinding of hard materials in water, 43
Flow properties
of slurries using refractive index matching technique and LDV, 211
Fluidized bed(s)
binary dielectric/conductor; electrostatic behaviour in, 11
dilute circulating; slip velocity distributions in riser of, 67
gas-: model of solid backmixing between stages in, with perforated baffles, 37
system; heat flux gauge and bubble probe for, 163
three-dimensional kinetic theory modelling of hydrodynamics and erosion in, 127
Fluidizing feeder
locally, for powder transport, 181
Fragmentation
experimental results on, of brittle material, 61

Gaseous jet
deposit of particles conveyed by, towards flat surface, 239
Gas-particle flow
non-fluidized; dynamics of, 147
Gas–solid suspensions
unsteady; statistical properties of, with strong particle–particle interactions in horizontal pipe flows, 51
Granular materials
cohesionless; experimental and theoretical study of rapid flows of, down inclined chutes, 109

Heat flux gauge
and bubble probe for fluidized bed system, 163
HGMS filtration
possibility of, in turbulent flow regime, 93
Hoppers
criteria for mass flow in, 251
Horizontal pipe flows
statistical properties of unsteady gas–solid suspensions with strong particle–particle interactions in, 51
Hydrodynamics
and erosion; three-dimensional kinetic theory modelling of, in fluidized beds, 127
Hydrogen generation
effect of fineness of wear particles from steel balls on rate of, during wet grinding of hard materials in water, 43

Inclined chutes
experimental and theoretical study of rapid flows of cohesionless granular materials down, 109
Industrial run-of-mine milling circuit
extended particle-size control of, 203

Jet
gaseous; deposit of particles conveyed by, towards flat surface, 239

Laser Doppler velocimetry (LDV)
and refractive index matching technique; flow properties of slurries using, 211
Lead
stability of dispersions of $PbTiO_3$ powders in aqueous and nonaqueous liquids, 157

Mass flow
criteria for, in hoppers, 251
Model
of solid backmixing between stages in gas-fluidized bed with perforated baffles, 37
Modelling
three-dimensional kinetic theory, of hydrodynamics and erosion in fluidized beds, 127

Particle aggregation
and breakage kinetics; *in situ* measurement of, in concentrated suspension, 75
Particle–particle interactions
strong; statistical properties of unsteady gas–solid suspensions with, in horizontal pipe flows, 51
Particle size
influence of, on adhesion behaviour of powders, after application of initial press-on force, 117
Particle-size control
extended, of industrial run-of-mine milling circuit, 203
Particle-size distribution
statistical analysis of parameters affecting measurement of, of silicon nitride powders by Sedigragh®, 275
Particle size measurement
using non-invasive dielectric sensors, 85
Particulate solid adhesion
effect of temperature on, to substrate surface, 267
Perforated baffles
model of solid backmixing between stages in gas-fluidized bed with, 37
Periodic motion
note on, of four spheres, 95
Potassium dihydrogen phosphate (KDP)
secondary nucleation of: interest of turbidimetric study, 195
Powder transport
locally fluidizing feeder for, 181

Rapid flows
experimental and theoretical study of, of cohesionless granular materials down inclined chutes, 109
Refractive index matching technique
and LDV, flow properties of slurries using, 211
Resin
highly conducting: sample preparation using; dielectric spectroscopy of compacted powders, 91

Secondary nucleation
of potassium dihydrogen phosphate (KDP): interest of turbidimetric study, 195
Sedimentation
is container-size dependent, 219
Sensors
non-invasive dielectric; particle size measurement using, 85
Shape separation
of particles, 1
Silicon nitride powders
statistical analysis of parameters affecting measurement of particle-size distribution of, by Sedigragh®, 275
Silver
water atomization of: effect of pressure and superheat, 169
Slip velocity distributions
in riser of dilute circulating fluidized bed, 67
Slurries
flow properties of, using refractive index matching technique and LDV, 211
Solid backmixing
model of, between stages in gas-fluidized bed with perforated baffles, 37
Solvent interactions
characterization of, with treated titanium dioxide powders, 139
Stability
of dispersions of $PbTiO_3$ powders in aqueous and nonaqueous liquids, 157
Statistical analysis
of parameters affecting measurement of particle-size distribution of silicon nitride powders by Sedigragh®, 275
Statistical properties
of unsteady gas–solid suspensions with strong particle–particle interactions in horizontal pipe flows, 51
Steel balls
effect of fineness of wear particles from, on rate of hydrogen generation during wet grinding of hard materials in water, 43
Surface
flat; deposit of particles conveyed by gaseous jet towards, 239
properties; influence of thermal activation on, of dolomite, 261
substrate; effect of temperature on particulate solid adhesion to, 267
Suspension(s)
concentrated; *in situ* measurement of particle aggregation and breakage kinetics in, 75
unsteady gas–solid; statistical properties of, with strong particle–particle interactions in horizontal pipe flows, 51

Thermal activation
influence of, on surface properties of dolomite, 261
Titanium
characterization of solvent interactions with treated titanium dioxide powders, 139
stability of dispersions of $PbTiO_3$ powders in aqueous and nonaqueous liquids, 157
Turbidimetric study
interest of; secondary nucleation of potassium dihydrogen phosphate (KDP), 195
Turbulent flow regime
possibility of HGMS filtration in, 93

Water atomization
of Ag: effect of pressure and superheat, 169
Wet grinding
effect of fineness of wear particles from steel balls on rate of hydrogen generation during, of hard materials in water, 43
